productivity

Corporate Challenge

The ANH is the Colombian state agency responsible for defining the state's oil policy, promoting and assigning areas for hydrocarbon exploration and production, the administration of oil contracts and the administration of royalties and economic rights derived from the exploitation and exploration of Colombian hydrocarbon resources. From an operational point of view, the response and solution times to the EPIS requirements by the oil industry and other entities were very high. From the technological tool point of view, the solution that ANH had to manage its information bank had reached its limit and there was no effective and timely support from the manufacturer of said solution. Improving EPIS management with organizations the size of Schlumberger, Halliburton and others will increase productivity significantly.

What SMX Services & Consulting Inc. Did

In less than NINE (9) months, SUN GEMINI implemented its solution for EPIS management, migrating more than 157 million files (about 1 PETABYTE) to the new platform. The operation managed to reduce its times by more than 30%. The above, with a solution that was licensed, cost the entity about 50% less than what the market was quoted on average at the time.

Value in the customer experience

The ANH selects SMX as the operator of the petroleum information bank (EPIS- exploration and production information service) and as a provider of its technological solution for the management of the EPIS, increasing response times and solving EPIS requirements, with effective and timely support.

" Supporting organizations with useful technological solutions to their challenges"
